

SL80 Solar Barge Light

Sealite manufactures variations of the popular SL07, SL60, SL70 and SL125 Lanterns for use as barge running lights.

In addition, the SL80 is a dedicated Solar Barge Light equipped with 2 x 5watt solar modules, and 4.5Ah SLA battery. The unit is constructed using robust materials, and a convenient handle aids in the installation and general operation.

All lanterns incorporate unique sector fittings permitting the light to be sectored in accordance with regional requirements such as the International Regulations for Preventing Collisions at Sea (COLREGS).

These sectors are typically 112.5 degrees for red and green lanterns and 135 degrees for white.

The SL125 lantern may be fitted with solar module configurations to enable the lantern to operate as an autonomous unit where power is not available.

All lanterns contain an internal sun-switch and activate automatically at night and deactivate in daylight.

Lanterns may be fitted with optional external ON/OFF toggle switches for ease of operation.
